

## Automate for Success

The SmartWaste Application Programme Interface (API) automates the input of data and the exposure of key performance indicators for business intelligence and analytics.

### 7 significant benefits for SmartWaste API customers:

*'Waste contractors are actively engaged and have really embraced the idea of using the API to provide value-added waste reporting services to their clients. It benefits both as a waste contractor/broker, but most importantly of all provides the end client, Robertson, with reliable instant waste reporting without the need for any manual intervention or time spent by site staff.'*

## Robertson

*'The implementation of the SmartWaste Application Programming Interface (API) is also improving the quality and input speed of waste data. Sisk's expectation is that they will have to capture more and more data, so the API is essential.'*

## Sisk

*'Countryside partnered with SmartWaste to unify its reporting approach, help improve the capture and reporting of waste, water and energy data to meet its reporting goals across Scopes 1 and 2, and now working towards Scope 3. SmartWaste was key to improving the speed, accuracy and consistency of data and the quality of information... Countryside implemented the SmartWaste Application Programming Interface (API) for its waste management contractors (WMCs).'*

## Countryside

## What data?

The SmartWaste API provides integration for:

### Energy

Collect electricity and gas usage data automatically from your energy brokers and energy suppliers.

### Waste and associated transport

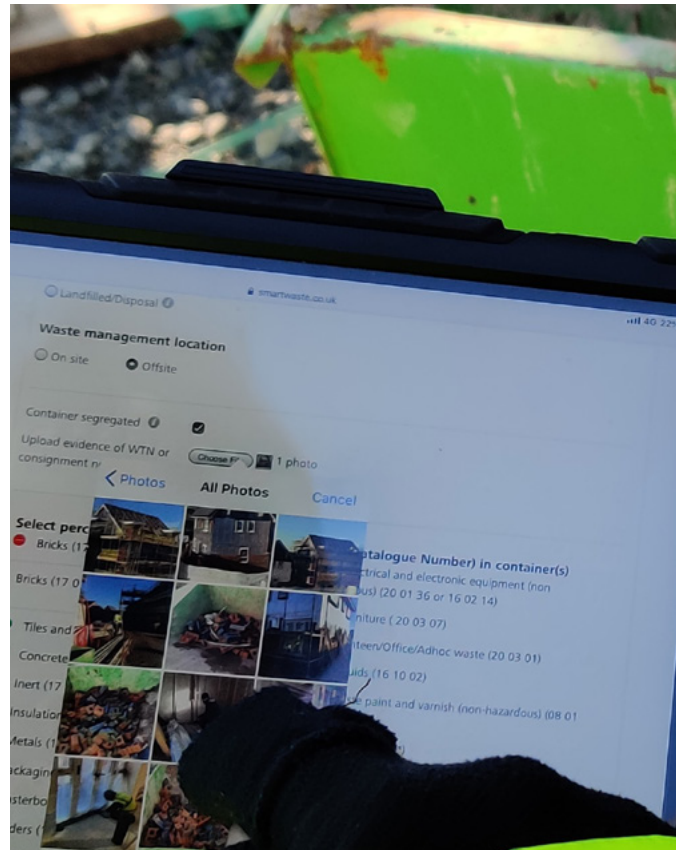

Automate waste data collection across all your waste brokers, waste management contractors and haulage firms. Enable third-party waste management software applications to communicate with and transfer waste and any associated transport data to SmartWaste.

### Materials and associated transport

Engage your material suppliers and contractors and automatically capture usage data.

### Business intelligence and analytic tools

Easily obtain SmartWaste KPI performance data for use in company dashboards and business intelligence systems, such as Microsoft Power BI.
